

This document lists all guidance documents published by IMCA and its predecessors (AODC and DPVOA), together with details on the latest versions and replacement documents as applicable.

Guidance is available for downloading by IMCA members via the website (<https://www.imca-int.com/>). With only limited exceptions, documents are not generally available to non-members. Reference numbers for current documents are linked to the relevant page on the website for ease of downloading.

## Grading of IMCA documents

IMCA has established a hierarchy of compliance terms for its technical documents, similar to the nomenclature used elsewhere in the wider offshore energy industry, using the following three descriptors:

- **IMCA Code of Practice (CoP)** – A document produced by the Association, the uniform application of which is recognised as essential for the safe and efficient conduct of marine contracting projects. IMCA expects the highest level of compliance with this category of document from its members.
- **IMCA Recommended Practice (RP)** – A document produced by the Association, the uniform application of which is recognised as necessary for the safe and efficient conduct of marine contracting projects. IMCA expects a high level of compliance with this category of document from its members.
- **IMCA Informative Guidance (IG)** – A document produced by the Association, the application of which is recognised as useful for the safe and efficient conduct of marine contracting projects. IMCA expects its members to take appropriate account of this category of document when planning, managing and conducting their marine contracting projects.
